Catalog No. H-CRYO100
Jan. 2020

Cryogenic Service Valves

- **Cryogenic Needle Valves**
1/2 in. to 1 in. Class 150, 300
- **Cryogenic Top Entry Wedge-Seat Ball Valves**
1/2 in. to 1 in. Class 150, 300, 600, 900
- **Cryogenic Top Entry Trunnion Ball Valves**
2 in. to 12 in. Class 150

FOR A BETTER

All Your Solution Provider “HY-LOK”

TOMORROW

Introduction

With long experience, Hy-Lok provides world-class engineered valve products and services to onshore, offshore plants across the globe. We provide leadership in design, manufacture and technical services for cryogenic service valves, using reliability data from our unique performance evaluation systems.

We deliver world-class quality which translates into optimum reliability and performance for plant operators globally. Hy-Lok holds world-class engineering intelligence at its core. This ethos is set to drive exciting new valve innovations to meet the evolving needs of the industry.

Standards

- The valve is designed in accordance with API 6D
- The body is designed and manufactured in accordance with ASME B16.34
- Flange dimensions in accordance with ASME B16.5
- Welding ends in accordance with ASME B16.25
- Fire Tested to API 607

Key Features

- Self relieving for prevent over pressure in the body cavity and extension bonnet.
- The flow arrow are marked on the body according to the pressure relief.
- Extends valve packing and operator away from cryogenic fluid.
- Allows operation in normal working temperature range.
- Top entry for in-line maintenance.
- Easy in line maintenance.

Functional Test

- Gas Leak Rates are Bubble Tight Shutoff \ API 598 \ API 6D \ ISO 5208
- Cryogenic Service Leak Rates comply with standards such as BS 6364

Nondestructive Test

- Casting and other pressure containing parts :
 - 10 % Radiographic tests per ASME B16.34
 - 100% Penetrant tests per ASME B16.34
- Butt welded ends :
 - 100% Radiographic tests per ASME B16.34

Cryogenic
Needle Valve

Cryogenic Top Entry
Wedge-Seat Ball Valve

Cryogenic Top Entry
Trunnion Ball Valve

Cryogenic Testing

Test Sequence

- 1) Ambient Temperature
 - Shell Leakage Test
 - Seat Leakage Test
- 2) Cryogenic Temperature
 - Initial Proving Test
 - Open/Close 20 Operating Cycles Test
 - Torque Test
 - Seat Leakage Test at Incremental Pressures
 - Shell Leakage Test
- 3) Ambient Temperature
 - Shell Leakage Test
 - Seat Leakage Test

Fire Safety Testing

Test Sequence

- 1) During Burn Period (30min. / 750°C~1000°C)
 - Through Seat Leakage
- 2) During Burn and Cool Down Period (5min. / Max. 100°C)
 - External Leakage
- 3) After Cool Down
 - Through Seat Leakage Test
- 4) After Operation
 - External Leakage Test

Type Approval Certificates

Valve Type	Size	Pressure Rating	Class
Cryogenic Needle Valve	1/2 in. & 1 in.	CL.150	ABS, BV, LR, DNV GL, KR
Cryogenic Needle Valve	1/2 in.	CL. 300	KR
Cryogenic Needle Valve	1/2 in. & 1 in.	CL. 150 to 1500	BV
Cryogenic Wedge-Seat Valve	1/2 to 2 in.	CL. 150/300/600 & 900	BV
Cryogenic Top Entry Trunnion Valves	2 to 12 in.	CL. 150	BV

Cryogenic Needle Valves

Bolted Extension Bonnet - Stainless Steel 1/2 in. to 1 in. & Class 150, 300

Hy-Lok's Cryogenic Needle Valves have been designed to eliminate leakages, maximize lifetime operation and reduce maintenance and spares cost. Prevents over pressure if liquid trapped in the extension bonnet.

Features & Benefits

- Bonnet flange design allows easy maintenance, even in confined spaces.
- Revolving disc ensures non-rotating seat contact for an extended leak free life.
- Minimize clearance between extension bonnet I.D and stem O.D.
- Prevent liquid trapped in the extension bonnet (Bi-directional).
- Non-welded bonnet extension.
- Spring loaded packing is long life.
- Dust cap with Position indicator.
- Stainless steel hand wheel.

Specifications

- **Pressure Rating :**
 - ASME Class 150, 300
- **End Connection**
 - Flanged End
 - Screwed End
 - Butt Weld End
- **Materials**
 - ASTM A182 F316/F316L Stainless Steel
 - ASTM A351 CF8M/CF3M Stainless Steel

Material of Construction

Component	Material Specification
1 Top Entry Body	ASTM A182 F316/316L or A351 CF8M/3M
2 Revolving Disc	316 Stainless Steel
3 Bonnet Gasket	Graphite & 316 SS
4 Bonnet Flange	ASTM A182 F316 or A351 CF8M
5 Bonnet Bolt	ASTM A320 B8M. Grad 2
6 Extension Bonnet	316 Stainless Steel
7 Extension Stem	316 Stainless Steel
8 Stem Packing	Graphite
9 Position Indicator	316 Stainless Steel
10 Handle Wheel	ASTM A351 CF8M

Cryogenic Top Entry Wedge-Seat Ball Valves

Extended Bonnet - Stainless Steel

1/2 in. to 1 in. & Class 150, 300, 600, 900

Hy-Lok's Cryogenic Top Entry Wedge-Seat Ball Valves have been designed to in-line for maintenance, which provides a remarkable time and cost savings for maintenance.

There is a pressure relief hole in the up-stream for prevent over pressure in the body cavity and extension bonnet.

Features & Benefits

- Upstream cavity pressure relief in the close position.
 - Pressure relief through upstream side.
 - Bi-directional.
- Minimize clearance between extension bonnet I.D and stem O.D.
- Non-welded bonnet extension.
- Spring loaded packing is long life.
- Top entry wedge-seat design.
- Top entry for in-line maintenance.
- Easy in line maintenance.
- Anti static design.
- Stainless steel lever handle.

Specifications

Cryogenic Top Entry Trunnion Ball Valves

Bolted Extension Bonnet - Stainless Steel

2 in. to 12 in. & Class 150

Hy-Lok's Cryogenic Top Entry Trunnion Ball Valves have been designed for in-line maintenance, which provides ease of operation at cryogenic service.

Features & Benefits

- 1-Single Piston Effect(SPE) and 1-Double Piston Effect(DPE) seat design.
 - Self relief through upstream side.
 - Bi-directional.
- Secondary seat sealing design.
- Non-welded bonnet extension.
- Top entry for in-line maintenance.
- Easy in line maintenance.
- Anti static design.
- Stainless steel lever handle.(below 2 in.)
- Gear operated.(above 3 in.)

Specifications

- **Pressure Rating :**
 - ASME Class 150
- **End Connection**
 - Flanged End
 - Butt Weld End
- **Materials**
 - ASTM A351 CF8M/CF3M Stainless Steel
